TRADE IMPORT AND EXPORT CLASSIFICATION (TRIEC)

Introduction

The Trade Import and Export Classification (TRIEC), has been developed by the Department of Foreign Affairs and Trade (DFAT) as a means of classifying Australia's merchandise imports and exports by level of processing. TRIEC is based on the previous DFAT Trade Export Classification (TREC).

TRIEC

TRIEC is a hierarchical classification, with the broadest classes of goods defined at the 1-digit level, with progressively finer disaggregation down to a 4-digit level. The classification breakdown is shown at *Appendix A*. TRIEC is a secondary classification that is based on the international Harmonized Commodity Description and Coding System (HS). The concordance between TRIEC and HS is shown at *Appendix B*.

Components of TRIEC

TRIEC is made up of three broad categories:

- *Primary products* - classified as either Unprocessed or Processed;
- *Manufactured products* – classified as either Simply transformed (STM) or Elaborately transformed (ETM); and
- *Other goods* – mainly Non-monetary gold and Confidential trade (see *Appendix C*).

The two main categories – Primary products (Unprocessed and Processed) and Manufactured products (STM and ETM) – effectively classify goods by stage of processing. Broadly defined:

- *Unprocessed primary products* are those that have undergone minimal, or no, transformation. Live animals for food, wheat, crude petroleum, ores & concentrates are examples.
- *Processed primary products* represent a higher stage of processing. Examples are chilled or frozen meat and seafood, butter and cheese, flour, canned fruit and vegetables, wine and automotive spirit.
- *STM* consist mainly of basic metal manufactures, chemicals and other intermediate manufactured goods which will be used as inputs into other goods. Examples include flat-rolled steel products, chemicals, leather and cotton yarn.
- *ETM* are generally what would be termed “finished goods”. ETM covers a vast range of goods, including machinery, whitegoods and other household wares, motor vehicles, clothing and footwear.

In a classification such as this there will inevitably be some items for which the distinction between the stages of processing will be a matter of judgment. This is particularly so in the case of STM and ETM, where the line between the two can be difficult to distinguish unambiguously.

TRIEC data is available in the DFAT [pivot tables](#).

Example of Aluminium products' level of processing

The manufacture of aluminium goods provides examples of all stages of processing. Australia exports aluminium products in all of the forms shown below:

Aluminium products – level of processing

Description	Broad category	TRIEC code
Aluminium ores & concentrates	Bauxite is the ore from which aluminium is obtained. The bauxite, when it is mined, is classified as an <i>Unprocessed primary product</i>	112
Alumina (aluminium oxide)	Further processing produces aluminium oxide (also known as alumina), and is classified as a <i>Processed primary product</i>	122
Aluminium, unwrought	With further processing, the aluminium oxide is transformed into unwrought aluminium – a basic cast form that includes sheets and billets. This is classified as a <i>STM</i>	231
Aluminium products	In the final stage of processing, aluminium articles such as aluminium foil, wire, pipes & tubes, door & window frames are produced. These are classified as an <i>ETM</i>	Variety of 24 such as: 243 244

History of TRIEC

TRIEC was based on the previous DFAT Trade Export Classification (TREC). TREC was a secondary classification that was originally based on the Australian Bureau of Statistics (ABS) Australian Export Commodity Classification (AECC). With the introduction of the international Harmonized Commodity Description and Coding System (HS) in 1988, TREC was re-concorded to the ABS Australian Harmonized Export Commodity Classification (AHECC) at the 8-digit level.

TREC was developed by DFAT primarily for the purpose of internal trade policy analysis and research. However, since its introduction in 1978 it came to be regarded more widely as a useful method of analysing Australia's export trade.

While closely related to the former TREC, the TRIEC classification addresses a number of limitations that affected TREC and expands the analytical scope of the classification to include both import and export merchandise trade data.

New TRIEC category 3013 – Works of art, collectors' pieces and antiques

With the update to HS2022 DFAT has now separately identified **Works of art, collectors' pieces and antiques** under "Other goods – Miscellaneous trade" category (TRIEC 301) for both exports and imports for all years.

The changes resulted in a reduction in both Australian exports and imports of Other semi-manufactures, elaborately transformed (TRIEC 2425) and Other miscellaneous manufactured articles nes (TRIEC 2449) and an increase in Other goods (TRIEC 3 and TRIEC 301).
