

ANNEX 3-B

PRODUCT-SPECIFIC RULES OF ORIGIN

Section A: Introductory Notes

1. For the purposes of this Annex:

Chapter means the first two digits in the tariff classification number under the Harmonized System;

heading means the first four digits in the tariff classification number under the Harmonized System;

subheading means the first six digits in the tariff classification number under the Harmonized System;

CC means change of Chapter (i.e. non-originating materials used in the production of the good must be classified in a different Chapter (two digits) from the classification of the good);

CTH means change of heading (i.e. non-originating materials used in the production of the good must be classified in a different heading (four digits) from the classification of the good);

CTSH means change of subheading (i.e. non-originating materials used in the production of the good must be classified in a different subheading (six digits) from the classification of the good); and

RVC(40) means that the good must have a regional value content of not less than 40%, as calculated in accordance with Article 3.4.

2. The product-specific rule of origin that applies to a subheading is set out immediately adjacent to it.

3. The product-specific rules of origin apply to goods in which non-originating materials have been used in the production process, as provided for in Article 3.2(c).

4. Where a product-specific rule of origin is defined by a criterion of change of tariff classification accompanied by the expression “except from”, it shall be construed to mean that the product-specific rule of origin requires that the excluded materials be originating for the good to be originating.

5. If a good is subject to a product-specific rule of origin that includes multiple requirements, the good shall be an originating good only if it satisfies all of the requirements.

6. If a good is subject to a product-specific rule of origin that includes alternative product-specific rules, the good shall be an originating good if it satisfies any one of the alternatives.

7. Section, Chapter or heading notes, where applicable, are found at the beginning of the relevant section or at the beginning of each Chapter, and are read in conjunction with the product-specific rules of origin and may impose further conditions on, or provide an alternative to, the product-specific rules of origin.

8. This Annex is formulated on the basis of the Harmonized System as updated as Version 2017.

Section B: Chemical Chapter Origin Rules

9. Chemical Reaction Origin Rule:

Notwithstanding the applicable product-specific rules of origin, a good of Chapters 28 through 40, heading 2707 or heading 2710 that is the product of a chemical reaction shall be considered to be an originating good if the chemical reaction occurred in the Area of a Party.

For the purposes of the chemical reaction origin rule, a “chemical reaction” is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.

The following are not considered to be chemical reactions for the purposes of determining whether a good is an originating good:

- (a) dissolving in water or other solvents;
- (b) the elimination of solvents including solvent water; or
- (c) the addition or elimination of water of crystallisation.

10. Distillation Rule:

Notwithstanding the applicable product-specific rules of origin, for the purposes of heading 2710, the following processes confer origin if the process occurred in the Area of a Party:

- (a) atmospheric distillation means a separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapour then condensed into different liquefied fractions. Goods produced from petroleum distillation may include liquefied petroleum gas, naphtha, gasoline, kerosene, diesel/heating oil, light gas oils and lubricating oil; or

- (b) vacuum distillation means distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation. Vacuum distillation is useful for distilling high-boiling and heat-sensitive materials such as heavy distillates in petroleum oils to produce light to heavy vacuum gas oils and residuum. In some refineries, gas oils may be further processed into lubricating oils.

11. Purification Origin Rule:

Notwithstanding the applicable product-specific rules of origin, for the purposes of Chapters 28 through 35 or Chapter 38, purification is considered to be origin conferring if it occurred in the Area of a Party, provided that one of the following criteria is satisfied:

- (a) purification of a good resulting in the elimination of not less than 80% of the content of existing impurities; or
- (b) the reduction or elimination of impurities results in a good suitable for one or more of the following applications:
 - (i) pharmaceutical, medicinal, cosmetic, veterinary, or food grade substances;
 - (ii) chemical products and reagents for analytical, diagnostic or laboratory uses;
 - (iii) elements and components for use in micro-elements;
 - (iv) specialised optical uses;
 - (v) non-toxic uses for health and safety;
 - (vi) biotechnical use;
 - (vii) carriers used in a separation process; or
 - (viii) nuclear grade uses.

12. Mixtures and Blends Origin Rule:

Notwithstanding the applicable product-specific rules of origin, a good of Chapters 30 or 31, heading 3302, subheading 3502.20, headings 3506 and 3507 or heading 3707 is an originating good if, in the Area of a Party, the deliberate and proportionally controlled mixing or blending (including dispersing) of materials to conform to predetermined specifications results in the production of a good having physical or chemical characteristics that are relevant to the purposes or uses of the good and are different from the input materials.

13. Change in Particle Size Origin Rule:

Notwithstanding the applicable product-specific rules of origin, a good of Chapters 30 or 31 satisfies the change in particle size origin rule if the good is the result of either of the following:

- (a) the deliberate and controlled reduction in particle size of a good, other than by merely crushing (or pressing), resulting in a good having a defined particle size, defined particle size distribution or defined surface area, which are relevant to the purposes of the resulting good and have different physical or chemical characteristics from the input materials; or
- (b) the deliberate and controlled modification in particle size of a good, other than by merely pressing, resulting in a good having a defined particle size, defined particle size distribution or defined surface area, which are relevant to the purposes of the resulting good and have different physical or chemical characteristics from the input materials.

A good of Chapters 30 or 31 that has undergone a change in particle size shall be considered to be an originating good if the process occurred in the Area of a Party.

14. Standards Materials Origin Rule:

Notwithstanding the applicable product-specific rules of origin, a standards material of Chapters 28 through 32, Chapter 35 or Chapter 38 is an originating good if the production of such good occurs in the Area of a Party. For the purposes of the standards materials origin rule, a “standards material” (including a standard solution) is a preparation suitable for analytical, calibrating or referencing uses with precise degrees of purity or proportions certified by the manufacturer.

15. Isomer Separation Origin Rule:

Notwithstanding the applicable product-specific rules of origin, a good of Chapters 28 through 32 or Chapter 35 is an originating good if the isolation or separation of isomers from mixtures of isomers occurs in the Area of a Party.
