

ANNEX II

PRODUCT SPECIFIC RULES OF ORIGIN

Section A: Introductory Notes

1. The specific rule or specific set of rules that applies to a particular subheading is set out immediately adjacent to the subheading, heading, or chapter, as applicable.
2. When a subheading or heading is subject to alternative specific rules of origin, the rule will be considered to be met if a good satisfies one of the alternatives.
3. A change in tariff classification requirement under this Annex requires that each of the non-originating materials used in the production of the good undergoes a change of tariff classification as a result of production in the territory of one or both Parties.
4. A good shall not be considered to be originating merely by reclassification of the good without any physical change.
5. For the purposes of the product specific rules set out in this Annex:
 - (a) **chapter** means the first two digits in the tariff classification number under the Harmonized System;
 - (b) **heading** means the first four digits in the tariff classification number under the Harmonized System;
 - (c) **subheading** means the first six digits in the tariff classification number under the Harmonized System;
 - (d) “**CC**” denotes a change to the chapter, heading or subheading from any other chapter. This indicates that all non-originating materials used in the production of the good have undergone a change in tariff classification at the two-digit level (i.e. a change in chapter) of the Harmonized System;
 - (e) “**CTH**” denotes a change to the chapter, heading or subheading from any other heading. This indicates that all non-originating materials used in the production of the good have undergone a change in tariff classification at the four-digit level (i.e. a change in heading) of the Harmonized System;
 - (f) “**CTSH**” denotes a change to the chapter, heading or subheading from any other subheading. This indicates that all non-originating materials used in the production of the good have undergone change in tariff classification at the six-digit level (i.e. a change in subheading) of the Harmonized System;

(g) “**RVC%**” denotes the minimum requirement of regional value content as calculated under Article 3.5 (Regional Value Content) of Chapter 3 (Rules of Origin and Implementation Procedures); and

(h) “**WO**” indicates that the good is wholly obtained in a Party as defined in Article 3.2 (Originating Goods) of Chapter 3 (Rules of Origin and Implementation Procedures).

6. This Annex is formulated on the basis of the Harmonised System as updated as Version 2012.

Section B: Chemical Chapter Origin Rules

7. Chemical Reaction Origin Rule:

Notwithstanding the applicable product specific rules of origin, any good of Chapters 27 to 40 that is the product of a chemical reaction shall be considered to be an originating good if the chemical reaction occurred in the territory of a Party.

For the purposes of this Section, a "chemical reaction" is a process (including a biochemical process) which results in a molecule with a new structure by breaking intramolecular bonds and by forming new intramolecular bonds, or by altering the spatial arrangement of atoms in a molecule.

The following are not considered to be chemical reactions for the purposes of determining whether a good is an originating good:

- (a) dissolving in water or other solvents;
- (b) the elimination of solvents including solvent water; or
- (c) the addition or elimination of water of crystallization.

8. Purification Origin Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of Chapters 28 to 35, 38 and 39, purification is considered to be origin conferring if it occurred in the territory of a Party, provided that one of the following criteria is satisfied:

- (a) purification of a good results in the elimination of not less than 80 percent of the content of existing impurities; or
- (b) the reduction or elimination of impurities results in a good suitable for one or more of the following applications:

- (i) pharmaceutical, medicinal, cosmetic, veterinary, or food grade substances;
- (ii) chemical products and reagents for analytical, diagnostic or laboratory uses;
- (iii) elements and components for use in micro-elements;
- (iv) specialized optical uses;
- (v) non-toxic uses for health and safety;
- (vi) biotechnical use;
- (vii) carriers used in a separation process; or
- (viii) nuclear grade uses.

9. Mixtures and Blends Origin Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of Chapters 30 and 31, heading 3302, subheading 3502.20, and headings 3506, 3507 and 3707, the deliberate and proportionally controlled mixing or blending (including dispersing) of materials to conform to predetermined specifications, which results in the production of a good having physical or chemical characteristics which are relevant to the purposes or uses of the good and are different from the input materials, is considered to be origin conferring if it occurred in the territory of a Party.

10. Change in Particle Size Origin Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of Chapters 30, 31 and 39, the deliberate and controlled modification in particle size of a good, other than by crushing or pressing, resulting in a good having a defined particle size, defined particle size distribution or defined surface area which is relevant to the purposes of the resulting good and having different physical or chemical characteristics from the input materials, is considered to be origin conferring if it occurred in the territory of a Party.

11. Standards Materials Origin Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of Chapters 28 to 32, 35 and 38, the production of standards materials is considered to be origin conferring if it occurred in the territory of a Party. For the purposes of this rule, "standards materials" (including standard solutions) are preparations suitable for analytical, calibrating or referencing uses having precise degrees of purity or proportions which are certified by the manufacturer.

12. Isomer Separation Origin Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of Chapters 28 to 32, 35 and 39, the isolation or separation of isomers from mixtures of isomers is considered to be origin conferring if it occurred in the territory of a Party.

13. Distillation Rule:

Notwithstanding the applicable product specific rules of origin, for the purposes of heading 27.10, the following processes confer origin if the process occurred in the territory of a Party:

(a) Atmospheric distillation - a separation process in which petroleum oils are converted, in a distillation tower, into fractions according to boiling point and the vapour then condensed into different liquefied fractions. Goods produced from petroleum distillation may include liquefied petroleum gas, naphtha, gasoline, kerosene, diesel/heating oil, light gas oils, and lubricating oil; or

(b) Vacuum distillation - distillation at a pressure below atmospheric but not so low that it would be classed as molecular distillation. Vacuum distillation is useful for distilling high-boiling and heat-sensitive materials such as heavy distillates in petroleum oils to produce light to heavy vacuum gas oils and residuum. In some refineries, gas oils may be further processed into lubricating oils.
