Net gains on financial liabilities

Note 7.3D: Fair Value of Financial Instruments

As DFAT only holds basic financial instruments the carrying amounts are a reasonable approximation of fair value.

Note 7.3E: Liquidity Risk

It is highly unlikely that DFAT will encounter difficulty in meeting its obligations associated with DFAT's basic financial liabilities given that it is a Commonwealth entity and has funding mechanisms available to ensure default does not occur. In addition, DFAT has internal policies and procedures in place to ensure there are sufficient resources to make payments and it has no history of default. All non-derivative financial liabilities are expected to maturity within the next 12 months. The department had no derivative financial liabilities in either 2017 or 2016.

Note 7.3F: Credit Risk

Credit risk is the possibility that a debtor will not repay some or all of a loan or receivable in a timely manner, causing loss to the department. The department is exposed to minimal credit risk as cash and cash equivalents, goods and services receivable and other receivables comprise all loans and receivables. The maximum exposure the department has to credit risk at the reporting date in relation to each class of recognised financial assets is the carrying amount of those assets indicated in the Statement of Financial Position.

The department has assessed the risk of default on payment and has allocated nil (2016: \$0.03m) to an impairment allowance for doubtful debts account. The department has no collateral to mitigate against credit risk.

Note 7.3G: Market Risk

Currency risk

Currency risk refers to the risk that the fair value of future cash flows of financial instruments will fluctuate due to changes in foreign currency exchange rates. DFAT is exposed to foreign currency exchange risk primarily through undertaking certain transactions denominated in a wide range of foreign currency through its overseas operations. The following table illustrates the effect on DFAT's operating result (profit or loss) and equity as at 30 June 2017 from a 10.2% (2016: 10.5%) increase or decrease against the AUD in the currencies in which financial instruments were held by the department, with all other variables held constant.

Interest Rate Risk and Other Price Risk

Interest rate risk refers to the risk that the fair value or future cash flows of a financial instrument will fluctuate because of changes in market interest rates. The department holds basic financial instruments that do not expose it to interest rate risk or other price risk.
